WORK EXPERIENCE

Software Engineer Intern
TN Digital Solutions
• Reduced average pipeline-run cost 22.7% while increasing law recall 69.1% by building a reusable Go/Python harness to map a cost/quality Pareto frontier; made reusable by building a generic evaluation orchestrator and microservice adapters
• Made Thai legal-AI evaluations more trustworthy by validating an LLM judge against a human lawyer and pairing it with deterministic citation, recall, and unsupported-claim checks
• Researched the legal-RAG modeling space (hierarchy-aware chunking, BGE-M3 retrieval, Thai fine-tuned models like Typhoon or SEA-LION) and measured how constrained decoding and reasoning affect answer faithfulness and citation grounding
